Atmospheric depth effect and brilliant colours OKALUX with LED

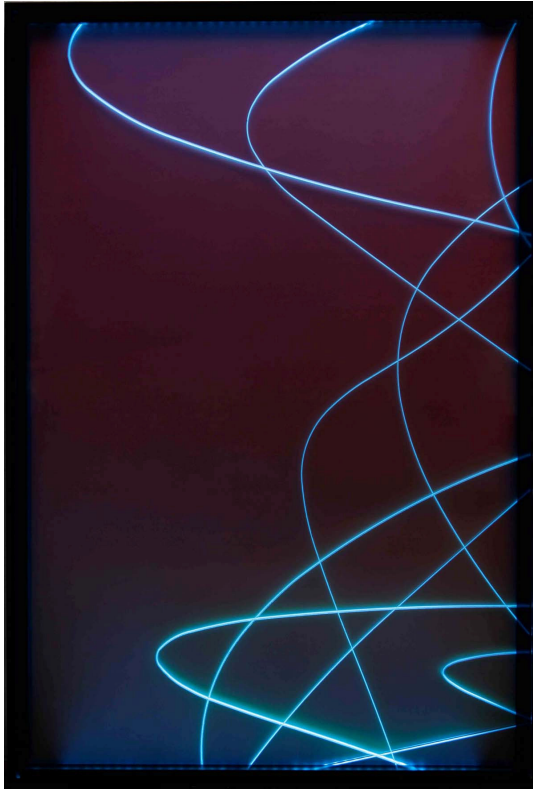

Marktheidenfeld / Tübingen, January 2011. OKALUX glazing with integrated LED creates fascinating light effects and opens up numerous configuration options for architects and interior designers. Almost any colour is available and different moods can be effectively realised. The light can be evenly dispersed across the entire face of the window or accentuated with graphic elements. In combination with different OKALUX products, e.g., capillary slabs or a brilliantly coloured OKACOLOR digital print, an unlimited number of variations is available. The result is a remarkable range of colour temperature, structure and decor.

LEDs can be applied in many ways: amongst other things, with partitions, dividing walls, signage, advertising space or as an illuminating element. An additional advantage is that LEDs consume minimal power and have a long service life.

You'll find OKALUX at BAU 2011 (Hall C2, Stand 303)
